It also has an exclusive chapter on asthma which covers epidemiology, mechanisms and management, reflecting the enormous research effort currently underway following a marked increase in the incidence of this disease in recent years. Although most common respiratory problems are treated by general internists and other specialty physicians, internists practicing pulmonary medicine (often referred to as "pulmonologists") are frequently called upon to help diagnose unknown disorders and assist in managing difficult, unusual, or complicated diseases of the respiratory system. Pulmonologists have expertise in structural, inflammatory, infectious, and neoplastic disorders of the lung parenchyma, pleura and airways, pulmonary vascular disease and its effect on the cardiovascular system, and detection and prevention of occupational and environmental causes of lung disease. Diseases commonly evaluated and treated by pulmonologists include asthma, chronic obstructive lung disease (COPD), emphysema, lung cancer, interstitial and occupational lung diseases, complex lung and pleural infections including tuberculosis, pulmonary hypertension, and cystic fibrosis. This volume present an up-to-date review of all aspects of lung disease, smoking, air pollution, sleep apnoea, diving, lung transplantation and medico-legal aspects. You're Reading a Free Preview Pages 1355 to 1395 are not shown in this preview. You're Reading a Free Preview Pages 228 to 399 are not shown in this preview. Training For pulmonary disease training alone, a two year fellowship is required following completion of a three year basic internal medicine residency, after which trainees are eligible for certification in pulmonary disease through the American Board of Internal Medicine. For combined pulmonary and critical care programs, fellowship training requires three years of training following completion of a three year basic internal medicine residency. This dual training uniquely qualifies critical care pulmonologists (sometimes called "intensivists") for work in intensive care units. Some pulmonologists focus on sleep-disordered breathing (such as sleep apnea) and may provide diagnostic and therapeutic services in sleep laboratories. Some pulmonologists practice in dedicated pulmonary medicine practices or as part of a multidisciplinary group practice and provide consultative services for other physicians and follow patients with respiratory disease longitudinally. Others may work within hospitals to provide patient care and consultative services. Because pulmonologists have expertise in respiratory failure and complex interventions such as mechanical ventilation, they frequently oversee medical intensive care units in hospitals. As this role involves care of critically ill patients, training in pulmonary medicine is often coupled with training in critical care medicine. The book is an excellent reference both for the trainee and specialist in respiratory medicine, as well as the general physician Table of Contents Development and Structure Functions of the Lung Epidemiology Lung Defences and Immunology Genetics of Lung Disease Clinical Aspects Diagnostic Imaging Minimally Invasive Diagnostic Procedures Drugs in Lung Disease Smoking Air Pollution Acute Upper Respiratory Tract Infection Pneumonia Empyema Lung Abscess Tuberculosis: Pathogenesis, Epi and Prevention Pulmonary Tuberculosis - Clinical Features Extra-Pulmonary Tuberculosis Mangement of Tuberculosis Opportunistic Mycobacterial Diseases Actinomycotic And Fungal Diseases Parasitic Diseases Chronic Obstructive Pulmonary Diseases Respiratory Failure Pulmonary Embolism Pulmonary Hypertension Pulmonary Oedema and ARDS Bronchiectasis Bronchiolar Diseases Cystic Fibrosis Cryptogenic Fibrosing Alcolitis Asthma - Epidemiology Asthma - Cellular and Humoral Mechanisms Asthma - Clinical Features Mangement of Asthma Reactive Airways Dysfunction Syndrome Hypersensitivity Lung Diseases Pulmonary Cosinophilias Sarcoidosis Lymphocytic Angiitis and Granulomatosis Lung Cancer Other Lung Neoplasms Diseases of the Pleura Pneumothorax Chest Wall and Neuromusular Disease Diaphragmatic Disease Sleep Apnoea Hyperventilation Syndromes Mediastinal Disease Developmental Disorders Other Rare Lung Diseases Lung Disease in the Immunosuppressed Pulmonary Manifestations of Systemic Disease Occupational Lung Diseases Drug-Induced Lung Diseases Paediatric Influences on Adult Lung Disease Diving and the Lung Assisted Ventilation Lung Transplantation Terminal Care Medico-Legal Aspects of Lung Disease Pulmonary medicine is the subspecialty of internal medicine that focuses on the diagnosis and management of disorders of the respiratory system, including the lungs, upper airways, thoracic cavity, and chest wall.
